VALVE FITTING OF ALCO SP-972 & SP-1041 DIESEL FUEL FILTERS

ALCO SP-972 & SP-1041

Both ALCO diesel fuel filters are manufactured in accordance to OE requirements so that issues regarding proper valve fitting that are often encountered with filters having non-OE connections are eliminated.

ISSUES WITH non-OE CONNECTIONS

Often, various aftermarket valves do not satisfy OE requirements regarding compatibility with original equipment and thus, valve fitting might be inadequate leading to improper functioning of the system. ALCO valve connectors on SP-972 & SP-1041 are manufactured to OE requirements, therefore, when fitted with the manufacturer's original valves such issues are avoided.

TECHNICAL ADVICE

ALCO recommends using only filters that are designed to comply with OE requirements, such as SP-972 & SP-1041, and furthermore, use only the manufacturer's original valves to ensure proper fitting and correct functioning of the system.
